Quiz, 10 questions

3.

During hyperparameter search, whether you try to babysit one model ("Panda" strategy) or train a lot of

Hyperparameterctuning Batch Normalization, Programming Frameworks

10/10 points (100%)

Quiz, 10 questio Whether you use batch or mini-batch optimization

10 quest	Holy Marchier you use butter or mini butter opening attorn					
	The presence of local minima (and saddle points) in your neural network					
0	The amount of computational power you can access					
Corre	Correct					
	The number of hyperparameters you have to tune					
~	1/1 point					
4.	think eta (hyperparameter for momentum) is between on 0.9 and 0.99, which of the following is the					
	mended way to sample a value for beta?					
	1 m m mander mand()					
	1 r = np.random.rand() 2 beta = r*0.09 + 0.9					
\circ	1 r = np.random.rand() 2 beta = 1-10**(- r - 1)					
Corre	ect					
	1 r = np.random.rand() 2 beta = 1-10**(- r + 1)					
	1 r = np.random.rand()					
	2 beta = r*0.9 + 0.09					

	T
	True
O	False

	h normalization as presented in the videos, if you apply it on the \emph{l} th layer of your neural netwre you normalizing?
	$W^{[l]}$
0	$z^{[l]}$
Corr	ect
	$m{b}^{[l]}$
	$a^{[l]}$
~	1 / 1 point
7. In the i	normalization formula $z_{norm}^{(i)}=rac{z^{(i)}-\mu}{\sqrt{\sigma^2+arepsilon}}$, why do we use epsilon?

To have a more accurate normalization

To avoid division by zero

Quiz, 10 questions

~	1 / 1 point		
8. Which of the following statements about γ and β in Batch Norm are true?			
	eta and γ are hyperparameters of the algorithm, which we tune via random sampling.		
Un-se	elected is correct		
	There is one global value of $\gamma\in\Re$ and one global value of $\beta\in\Re$ for each layer, and applies to all the hidden units in that layer.		
Un-se	elected is correct		
	They set the mean and variance of the linear variable $z^{[l]}$ of a given layer.		
Correct			
	The optimal values are $\gamma=\sqrt{\sigma^2+arepsilon}$, and $eta=\mu$.		
Un-selected is correct			
	They can be learned using Adam, Gradient descent with momentum, or RMSprop, not just with gradient descent.		
Correct			
~	1/1 point		
	aining a neural network with Batch Norm, at test time, to evaluate the neural network on a new e you should:		
	Use the most recent mini-batch's value of μ and σ^2 to perform the needed normalizations.		

15/2019	Improving Deep Neural Networks: Hyperparameter tuning, Regularization and Optimization - Home Coursera
Hyperpa Framew Juiz, 10 ques	If you implemented Batch Norm on mini-batches of (say) 256 examples, then to evaluate on one atanochetetuping,由在由内包括的点式在前的,但是多数的形式的。10/10 points /OFINS size as during training. (100%)
0	Perform the needed normalizations, use μ and σ^2 estimated using an exponentially weighted average across mini-batches seen during training.
Corr	roct
Corr	ect
	Skip the step where you normalize using μ and σ^2 since a single test example cannot be normalized.
~	1 / 1 point
10. W hich	of these statements about deep learning programming frameworks are true? (Check all that apply)
	Even if a project is currently open source, good governance of the project helps ensure that the it remains open even in the long term, rather than become closed or modified to benefit only one company.
Corr	rect
Con	
	Deep learning programming frameworks require cloud-based machines to run.
Un-s	selected is correct
	A programming framework allows you to code up deep learning algorithms with typically fewer lines of code than a lower-level language such as Python.
Corr	rect
